

MEMORY CARD CONNECTOR

ABSTRACT

The present invention relates to a memory card connector
5 comprising an insulation base seat, a shielding shell, a plurality of
conductive terminals, a detecting means, a writing-protection detecting,
and a card advancing/withdrawing mechanism. The card
advancing/withdrawing mechanism has an integral connecting arm, and
therefore made simple constituent parts and low manufacturing cost. The
10 present invention is applicable to memory card automatic locating and
withdrawing.
